Medical Solutions

Experience, scale and clinical capability

Everything you need from a specialist event medical provider - under one roof.

A dedicated fleet built for event environments

EST 2015

Long-standing experience delivering event medical operations across the UK.

26+ vehicles

Dedicated event ambulances, rapid response and all-terrain capability.

High Risk + High Capacity

Our vast and expansive nature and number of resources allows for those events that are larger or generally considered higher risk.

UK-wide

Scalable provision for events from 250 to 100,000+ attendees.

Clinically led management

Our management team are registered healthcare professionals, combining clinical understanding with event operations.

Medical provision built around your event

An evidence-based medical plan that is practical, proportionate and easy to defend.

- ✓ Evidence-based medical planning
- ✓ CQC clinical governance framework
- ✓ Appropriately qualified clinical teams
- ✓ Dedicated vehicles and infrastructure
- ✓ Clear documentation for SAG / licensing
- ✓ Nationwide operational capability

**PROTECT THE
EVENT.
PROTECT THE
ATTENDEE.**

We help organisers balance SAG expectations, licensing conditions, insurer requirements, operational realities and budget.

The result is the right level of medical cover - not simply the biggest package.

Treat on site, wherever clinically appropriate

Our model is designed to manage more patients effectively within the event environment - with hospital transfer remaining a clinical decision when it is required.

A complete package of command, control and clinical coordination

On-site assessment

Our clinicians can assess, treat and manage patients at the event wherever safe and clinically appropriate.

Advanced capability

Treatment environments can include patient monitoring, ultrasound, X-ray and specialist equipment.

Better patient journey

Many patients can be treated and safely discharged without unnecessary onward hospital admission.

Smarter operations

Reducing avoidable transfers can minimise disruption to the event and unnecessary pressure on local hospitals.

Where hospital care is required, our clinicians identify this and arrange the appropriate onward transfer.

Systems that support clinical decisions

Technology supports communication, patient management and command across complex sites.

Command & control

A dedicated operational layer can coordinate medical teams, resources and communications across large sites.

Patient management

Systems support structured assessment, recording, handover and clinical oversight.

Site-wide response

Resource mapping and radio communication help teams reach incidents quickly across complex venues.

Integrated operation

Planning, clinicians, infrastructure and governance work as one medical service.

**MOBILE
MEDICINE
MEETS
MODERN
EVENT OPS**

- Resource mapping
- Licensed radio communications
- Digital patient information
- Command and control capability

Built for the realities of live events

A fleet designed for complex event environments

From frontline ambulance provision to purpose-built all-terrain response, we can put the right vehicle in the right place.

Purpose-built mobility for live events

6x6 ALL-TERRAIN

Purpose-built 6x6 vehicles with built-in stretcher capability and space for clinicians. Ideal for difficult terrain and extended festival sites.

4x4 ALL-TERRAIN

Purpose-built 4x4 response capability, including rescue-stretcher options, for rapid access where conventional vehicles cannot operate.

QUAD BIKES

4x4 quad bikes provide agile response across large crowds, grassland, tracks and other difficult-to-access event environments.

RESPONSE & TRANSPORT

Rapid Response cars, clinician response cars, patient transport vehicles and frontline ambulances can be combined into one deployment model.

The fleet is scaled around your site, audience, access routes and risk profile — not a one-size-fits-all package.

A connected medical operation

Our command capability provides the operational layer needed to coordinate clinical teams complex sites.

RADIO NETWORK

Licensed radio communications support reliable, site-wide contact between command, clinicians, response vehicles and other operational teams.

CONNECTED COMMAND

Command vehicles can provide Wi-Fi, communications technology, digital systems and the operational workspace needed for large deployments.

RESOURCE MAPPING

Track the position and availability of deployed resources to help direct the nearest appropriate clinical response.

CLINICAL OVERSIGHT

Structured patient information and clear handover pathways support clinical oversight and informed decision-making.

For major festivals, command and control is not an optional extra — it is what turns multiple medical resources into one coordinated operation.

COMMAND CENTRE

A dedicated command environment supporting real-time coordination across the event medical operation.

Mobile X-ray — bringing diagnostics into the event medical environment

On-site digital chest and musculoskeletal X-ray can extend what the clinical team can safely assess and manage without immediate hospital transfer.

UK'S ONLY AMBULANCE-CONTAINED EVENT X-RAY

X-RAY WITHIN THE AMBULANCE

Our specialist event X-ray capability is contained within ambulance vehicles, bringing diagnostic imaging directly into the event medical operation. This is a distinctive UK capability designed to reduce avoidable transfer where clinically appropriate.

IR(ME)R 2017 COMPLIANT PATHWAYS

CHEST X-RAY

Rapid chest imaging to support assessment of thoracic trauma, pneumothorax and relevant respiratory presentations.

RAPID DIGITAL REPORTING

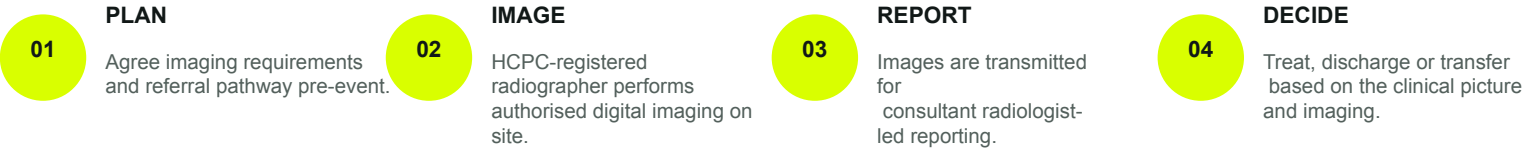

Digital images can be transmitted electronically for consultant radiologist-led reporting, with written reports issued rapidly to support the treating clinician.

MUSCULOSKELETAL X-RAY

On-site imaging for fractures, dislocations and other musculoskeletal injuries sustained at festivals and high-risk sporting events.

LESS UNNECESSARY TRANSFER

When clinically appropriate, on-site diagnostics can help the medical team manage the patient at the event and make better-informed decisions about discharge or onward care.

The right clinician at the right level

A multidisciplinary team allows us to build a response model that matches the risk - rather than forcing every event into the same package.

Responders

FREC 3 / FREC 4 responders provide the backbone of many event deployments.

Technicians

AAP, FREC 5, IHCD and Emergency Medical Technicians, as required.

Nursing & advanced practice

Registered Nurses, ANPs and Advanced Clinical Practitioners.

Paramedics & doctors

HCPC-registered Paramedics and GMC-registered Doctors for higher-acuity requirements.

All clinical staff work within our governance, training and competency framework.

Confidence that stands up to scrutiny

Our operation is designed to support your H&S, SAG, licensing and insurance requirements.

CQC registered

Regulated medical activities delivered within a structured clinical governance framework.

100+ hours CPD

Continuous professional development and training maintained across our clinical teams.

Policies & procedures

Audited policies, incident reporting, supervision, equipment controls and quality monitoring.

Healthcare-led management

Our management team are registered healthcare professionals.

Documentation can include:

- ✓ Medical Risk Assessment
- ✓ Medical Management Plan
- ✓ Policies, certificates & summaries

No standard package - just the right solution

We assess the individual event, then scale people, vehicles, facilities and command structures around the risk.

Attendance & demographics

Audience size, profile and expected medical demand.

Site & access

Footprint, terrain, access routes and medical facility locations.

Event profile

Alcohol, late licensing, activities and known risk factors.

Stakeholder needs

SAG, licensing, insurer and client requirements.

Experience across:

FESTIVALS

LIVE MUSIC

SPORT

EXHIBITIONS

PROVEN IN LIVE ENVIRONMENTS

Trusted across major UK events

Experience across major festivals, venues, sport, public events and large-scale shows.

Our current website also highlights provision for hundreds of arena concerts and exhibitions, festivals, agricultural/equestrian events and specialist sports.

The common thread: professional medical provision delivered in complex, live environments.

Major event experience means fewer surprises on the day - because we understand how event operations actually work.

READY TO PLAN YOUR EVENT?

Let us quote for your event.

We would welcome the opportunity to be considered for your event and to submit a quotation or formal tender response where appropriate.

For an initial proposal, we usually need:

- ✓ Event date(s) and location
- ✓ Expected attendance and event type
- ✓ Site layout / footprint
- ✓ Alcohol, late licence & high-risk activities
